

HOSOKAWA BEPEX GmbH

Technologies for compaction, briquetting, extrusion and spheronization

news LETTER

2005 – no. 1

Hosokawa Bepex GmbH presents a new generation of Roller Compactors for high purity chemicals, minerals and metals.

New look!

More than stainless steel.

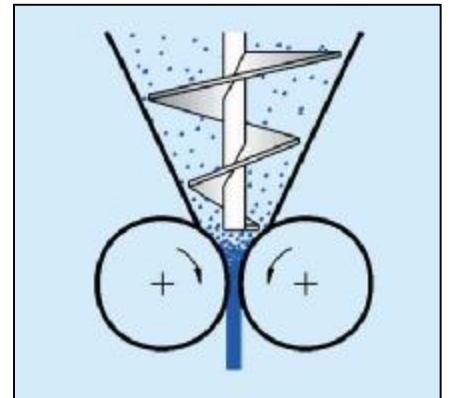

Coatings with plasma made materials and hydro fluorocarbons, ceramic linings for covers, chutes and guiding components.

Press rolls made of ceramic materials!

Ask us for more details!

What's new?

- No contamination of product.
- Suitable for very corrosive products.
- No excessive costs caused by abrasion.

HOSOKAWA BEPEX GmbH

Technologies for compaction, briquetting, extrusion and spheronization

Features:

Safe and clean

Electrically controlled docking systems for feed and discharge ensure operational safety.

Nitrogen purging

Residues of reactive gases and chemicals? - No problem, the equipment is flushed with nitrogen before the process starts and the level of nitrogen is constantly monitored and controlled.

ATEX

You are safe with us. Our products conform to guideline 94/9 EC and directive 1999/92/EC (ATEX 137)

Process control

Electronic strain gauge for the press force - there is no better way to control the quality of flakes and briquettes.

More than just controls

- Fully automatic, with data back-up for quality assurance.
- Recipe manager
- Multi-language display
- Password levels

The system is completely assembled and tested before shipment.

Floor space: 2 x 3 m

Head room: 3 - 4 m, depending on drum/ containers sizes.

Capacity: up to 400 kg/h
